Project Manager – Arm Budapest

About the Role

The Project Manager will work closely with the Product Manager, Technical Lead, and engineering teams. In this leadership role, you'll be able to drive engineering projects from conception to final delivery to ensure quality, on-spec, and on-time delivery of products!
The candidate should have a proven record across all aspects of the project management lifecycle. Responsibilities include initiating, planning, scheduling, tracking/monitoring, resource allocation, issue/risk management, carrying out the projects against committed milestones, managing project members and dependencies. Presenting to our internal and external project stakeholders in a regular fashion.

Essential Skills & Experience

- First-class communications skills, both written and verbal in English
- Experience of driving projects in a constantly evolving development environment
- Demonstrated ability in building plans from a high level to a detailed schedule
- Clear understanding of, and ability to apply the concepts of risk management
- Ability to lead team members through personal leadership and clear project goals
- Ability to communicate with highly skilled engineering teams and senior managers,
- Influence decisions and adapt our plans to changes in the project scope, schedule and cost

Desirable Skills & Experience

- Pro-active and pragmatic with regards to problem-solving
- Experience collaborating closely with customers, partners and remote development teams
- Formal project management qualification (e.g. PMP, Prince2)
- Familiar with tools such as Microsoft Project, Jira, Confluence,
- Familiar configuration methods, versioning and documentation tools
- Understanding of a range of hardware and software development lifecycle methods (e.g., waterfall, iterative, agile)
- Self-motivated, looking to accept new challenges
- Professional, with strong attention to detail

Education & Qualifications

A university degree (or equivalent) in either Engineering or Computer Science is desired, although other degrees would be considered if there is relevant experience.

Why you will love this job?

You will work directly with diverse team of engineers across the company to build next-generation IPs with innovative technology! You will have a direct impact on the solution delivery roadmap. You will be part of a growing, fast-pace lively team. Our Budapest office offers a friendly, high-performance work environment and a competitive benefits package. This role may also require a minimal level of travel to work across Arm.
