

Last year, we helped more than 200 million customers all over the world make their own kind of progress.

What progress will you make?

PROJECT MANAGER

The Chief Information Security Office's Global Identity and Access Management Governance team (CISO GIAM Governance) is seeking an **experienced project manager, preferably with a management or technology consulting background**, in the Identity and Access Management security domain. The person will be in charge of supporting and delivering program and project efforts aimed at improving, standardizing and streamlining processes and governance practices around the information security space, especially privileged access in infrastructure platforms. The role will also require a candidate who can contribute thought leadership and strategic vision to the areas the team tackles and show demonstrable methodological thinking.

The role requires interaction with global IT partners and information security personnel providing project management, documentation and facilitation to work streams supported regionally across Citi's global footprint. Projects will include improving process and technical controls around access provisioning and controls, infrastructure management and robotics, working with business and technology personnel to identify gaps in the management of data or accounts, especially privileged data, and implementing enhanced monitoring processes and tools.

As a Project Manager you will:

- Gather and analyze data from multiple sources; develop reports and key risk indicators.
- Communicate project plans and routine updates on project status to the project team and stakeholders.
- Consult with stakeholders to gather and document requirements and specifications for solutions and enhancements.
- Document and maintain program related training and awareness materials and communications.
- Facilitate discussions, conduct meetings and drive initiatives to conclusion.

Ideal background:

- Strong communications skills and facilitation experience across all levels of leadership, particularly in English.
- Bachelor's degree/University degree or equivalent experience.
- Minimum 5 years' experience in project management and business analysis with experience using a structured methodology.
- In-depth knowledge of technology, security, risk and compliance best practices. Strong capability in interfacing with both technology and business areas, experience with analyzing and documenting business requirements and interfacing with application developers.
- Knowledge of Infrastructure Information Security Standards and best practices including Active Directory, Wintel, Unix, Mainframe and Database Management Systems.
- Advanced analytical problem solving skills, including the ability to analyze datasets and present in a format that facilitates senior management decision making.

Advantages:

- Familiarity with cloud services, AWS, and/or robotics or other automation processes.
- MS Access experience.
- Prior consulting experience
- Experience with privileged access management tools like CyberArk

Benefits:

- Opportunity to widen your knowledge in the HR field
- Long-term career path across geographies and business lines
- Friendly work atmosphere
- Competitive compensation package
- Flexible work arrangements
- Paid Parental Leave Program
- Private Medical Care Program and onsite medical rooms in our buildings
- Pension Plan Contribution to Voluntary Pension Fund
- Group Life Insurance
